

SAPIE, a first ever Personal A.I. secretary

is released by Speereo Software UK

15/12/2006

SAPIE, a first ever Personal A.I. secretary is designed to fulfill the whole range of secretary duties. It was raised under strict supervision in Speereo Software Labs. It can be installed on your handheld device to help you maintain your agenda, contacts, tasks and email accounts. SAPIE is developed for Windows Mobile 2003/5.0

We've taught her to recognize a number of speech commands telling her how to respond. It's useless to discuss poetry with her. She's able to understand only the duty-related tasks. For example, to remind you of the events keeping your schedule clear, to record your contacts connecting you with them if needed, to send letters you've dictated to her, to note your progress in various projects. That is to say all the duties of a usual secretary.

SAPIE is based on Speereo Speech Recognition technology (SSR) that offers you 99,9% accuracy and speaker-independency. SAPIE is able to maintain a natural dialogue with you, so you can now carry your briefcase or drive a car while speaking to your personal adviser. Don't bother and don't tap the screen.

Since SAPIE is an artificial intelligence unit, you can teach her custom commands according to his own needs. One phrase to launch SAPIE, another phrase to record a reminder. SAPIE is obviously time-effective.

Compared to human beings, SAPIE has lots of advantages; she never sleeps, she is never in poor health, she works for a song. Her current level of sophistication doesn't allow you to dictate neither poems nor legal documents. However, she copes with her tasks well.

The only prerequisite you're required to learn are the four starting phrases. Then just let SAPIE ask you the details. These dialogs are close to human ones. All the necessary information will be shown on the display. Spend a couple of minutes when getting started and SAPIE will know when YOUR morning starts, what communication style you prefer. Afterwards, you could just pronounce something like: "remind me to call my partner tomorrow after lunch". And she'll understand you right away!

SAPIE. More human than one can imagine.

###

About Speereo Software UK, Ltd

Speereo Software is a British IT company established in 1998 and involved in the development of proprietary speech technologies. Speereo Software has brought together engineers, mathematicians, and programmers experienced in the area of speech processing. Currently we employ 100+ people in the company. Now the work on the speech recognition technology embodies 150 person-years. Thus far R&D has been financed internally by revenue generated from IT consulting.
